PROFESSIONAL SUMMARY

Information Systems & Finance student (graduating December 2026) with hands-on experience in cross-functional program coordination, fleet data analysis, dashboard development, and process documentation. Proven ability to manage multiple priorities, draft stakeholder-facing content, track action items, and support operational programs in fast-paced environments. Proficient in Excel, SQL, Tableau, and Python. Passionate about sustainable transportation and electric vehicle technology.

SKILLS

Tools & Software: Microsoft Excel, PowerPoint, Word, SQL, Python, Tableau, Git, Supabase, PostgreSQL
Program Management: Cross-functional coordination, action item tracking, meeting facilitation, agile workflows, market readiness support
Data & Reporting: Data analysis, KPI dashboard development, fleet performance metrics, trend identification, mean time between failures (MTBF), report development
Communication: Stakeholder reporting, customer-facing content drafting, technical writing, process documentation, driver education materials

WORK EXPERIENCE

Web3 development & Support Intern · TheBenefactor.net · Remote *Jan 2026 – Present*

- Coordinated cross-functional workflows between engineering, product, and operations teams — tracked action items, maintained program documentation, and ensured timely delivery of iterative releases
- Identified, reproduced, and documented critical platform failures affecting authentication and account-state workflows, improving overall platform stability and uptime
- Performed structured end-to-end workflow validation to reduce user-facing errors and surface process bottlenecks for team review
- Collaborated in peer review discussions and iterative design improvement cycles within an agile environment
- Drafted and maintained service logic documentation and debugging procedures to improve long-term operational maintainability
- Researched best practices and contributed findings to team planning sessions to inform feature prioritization and process improvements

Data & Systems Assistant Nepalese Student Association · St. Cloud State University *Jan 2023 – May 2024*

- Maintained and optimized SQL-based datasets ensuring high data integrity across operational reporting systems used by program coordinators and administrators
- Resolved structured data inconsistencies across multiple datasets, improving reporting accuracy and supporting institutional decision-making
- Designed reliable query workflows for secure, accurate data retrieval; produced summary reports used for participation tracking and event management

SELECTED PROJECTS

Full Stack Analytics Platform · *Python · SQL · PostgreSQL · Tableau · FastAPI*

- Architected end-to-end data ingestion and processing pipelines; designed KPI dashboards tracking time-series operational metrics and fleet-level performance trends for stakeholder consumption
- Built and documented normalized relational schemas and RESTful backend services; applied SDLC principles including iterative development, validation testing, and structured refactoring

Application Manager — Workflow Tracking Tool · *C# · .NET · SQL*

- Developed a cross-functional workflow tracking application with status management, deadline tracking, and structured record-keeping — solving a real operational coordination problem
- Implemented filtering, progress monitoring, and documentation features; applied clean OOP design principles for reliability and long-term maintainability

Routine — Personal Analytics Platform · *Python · FastAPI · PostgreSQL · React*

- Engineered interactive reporting dashboards tracking cross-domain metrics; designed time-series validation logic and structured documentation for system extensibility and performance optimization

EDUCATION

St. Cloud State University *Expected December 2026*
Bachelor of Science, Information Systems & Finance
Relevant Coursework: Systems Analysis & Design, Database Design, Enterprise Architecture, Business Statistics, Data Structures & Algorithms

ADDITIONAL

Donor Ambassador · American Red Cross Jan 2023 – Jul 2025 · Coordinated donor workflows in high-volume environments; communicated procedures clearly to diverse populations and maintained operational reliability under time pressure
